

THE ATLANTA ASTERISK USERS GROUP AND
THE GEORGIA TECH INFORMATION SECURITY CENTER
INVITES YOU TO THE THIRD ANNUAL

ASTERISK CONFERENCE AND INSTALL FEST

Asterisk is a Free Open Source Software Voice and Video Over IP Telecommunications Project

When: Saturday, April 18, 2009, 9:00AM to 4:00PM

Where: Georgia Institute of Technology
Christopher W. Klaus Advanced Computing Building
266 Ferst Drive, Atlanta, GA 30332

Admission: Free to Everyone. No Charge.

What: Asterisk based systems can provide fully customizable and private Voice Over IP (VoIP) telecommunications services to individuals and organizations of virtually any size. Many features are available at no cost and include voicemail, e-mail notifications, conferencing, fax, call detail logs, least-cost-call-routing, interactive voice response menus and web application interfaces.

This year's program consists of two tracks in two lecture halls. One track focuses on the basic installation and configuration of Asterisk. That's where volunteers install and configure Asterisk on attendee supplied computers for free. The installation and configuration will be shown and explained using the lecture hall projection screens. The second track in the other hall features more advanced topics for current users and system administrators. We have a full day of valuable presentations from internationally prominent users, developers and vendors.

You really should attend if you want to learn how to make the most of Asterisk based VoIP software and systems. Please review the full agenda and register now at <http://www.atlaug.com> so we can have the materials and meals available to make this a great Asterisk experience for you!

Who: Enjoy presentations from leading VoIP organizations including Digium, Sangoma, PBX in a Flash, Snom, Aastra, Cbeyond, Aretta, Pika, IP Comms, Fonica, Centric Voice and VoiceRoute.

Atlanta Asterisk Users Group (ATLAUG) – This group is one of the nation's most respected and active Asterisk Users Groups. It meets regularly for the purpose of exchanging information, providing mutual aid and fostering the growth of Asterisk systems in personal and business applications.

Georgia Tech Information Security Center (GTISC) - Based on its vision that effective information security will only be achieved through user-centered approaches, GTISC fosters the safeguarding of digital information through innovative research and education. VoIP security is an area of active research within GTISC, and GTISC is proud to support the VoIP community by hosting the Conference and Install Fest.
